### The Failure of Quantifying Science to Use Water Professionally

**Does science know how the tides function? No! Does science know how pressure tubes have to be built? No! Does science know how to make rivers flow or to care for agriculture? No! & so on & so forth: in the face of natural lore the natural sciences are incompetent claptrap & an enormous problem for civilization & technological progress.**

**Abstract:** The formula for water is "H<sub>2</sub>O": by quantifying it is stripping the substance "water" of more than 40 so-called "anomalies" to practically non-existence &, together with also non-existent "mass attraction", the formula is preventing insights & research into most vital applications. Billions of Megawatts can be gained in hydroelectric power stations by nature conforming tubes & turbine blades. The SGR (Substance-relevant Gravity Resonance) between the Moon & water produces the tides by a changing volume of water, *ie* a change of its specific weight: it stands as an eternal disgrace of the natural sciences having never realised this quite measurable fact. In connexion to still other substance-relevant resonances proper use of, *eg*, copper in agriculture promises to improve ground water levels together with the growth of plants without recourse to fertilizer. Plus, still more, the vortex merits of water have been instrumental toward hoping that cheap thermo as well as impelling & levitating devices can be realised – unfortunately such research is seriously hampered by taking conventional physics for granted. But where this was obviously not decisive, *eg* in the medical environment, qualifying experimental research has led to important results..

Taking the substance "water" for an example, this paper is an appeal to stop the lapidification which the sciences exercise through their collective psychopathologic mania of perverting nature by Quantification> Mathematics> Models> Scientific Method into a corpus of UQT<sup>1</sup>, thus outstandingly contributing to civilization problems. **Already to the first question, "what is to be thought of sciences which for 5 centuries have insisted to ascribe the tides to qualitative "mass attraction", the answer must be: In the face of natural lore observation – nothing is yanking 2 waves (one facing the other opposite the moon), twice a day around the globe! – & of ICS<sup>2</sup>, now also substantiated by SGR<sup>3</sup> on the GFMI<sup>4</sup>, such science because of its quantifying mania is confirmed as an utterly inexcusable & indefensible absurdity.** Only the water running against & away from the shores produces a bit of current, a ship on the high seas is only being lifted or subsiding on the volume changes of the water. **The tides, therefore, are being caused by the change of the water's specific weight**, *ie* by the increase & decrease of its volume (similar to when it freezes). This process can even be observed at full moon (when the sun-earth-

<sup>1</sup> UQT = Unlogical Quantifying Theories (*cf* [www.paf.li/Quantification.pdf](http://www.paf.li/Quantification.pdf))

<sup>2</sup> ICS = Informed Common Sense

<sup>3</sup> SGR = Substance-relevant Gravitational Resonance (*cf* [www.sources.li/SGR-e.pdf](http://www.sources.li/SGR-e.pdf))

<sup>4</sup> GFMI = Gravitational Field Measuring Instrument:  
Functionality: [www.sources.li/gfmi-proof.pdf](http://www.sources.li/gfmi-proof.pdf),  
Description: [www.sources.li/physical-congress-2006.pdf](http://www.sources.li/physical-congress-2006.pdf);  
Experiment output online in <http://evu.paf.li>, substance-relevant @  
<http://evu.paf.li/rrd/hg.html> - Mercury  
<http://evu.paf.li/rrd/cu.html> - Copper  
<http://evu.paf.li/rrd/sn.html> - Tin  
<http://evu.paf.li/rrd/pb.html> - Lead

moon gravitational vortexes are at their highest efficiency, cf the EVU<sup>5</sup>) very simply by having a tall mug overflow at such a moment<sup>6</sup>.

According, eg, to [www.lsbu.ac.uk/water/anmlies.html](http://www.lsbu.ac.uk/water/anmlies.html) & [www.lsbu.ac.uk/water/sitemap.html](http://www.lsbu.ac.uk/water/sitemap.html) there are 41 qualitative "anomalies" of the substance Water, which can never be expressed by the quantifying formula of "H<sub>2</sub>O"; but the 42nd one – the change of the water's specific weight not only due to temperature, eg when freezing, but also under the influence of the moon's (& presumably other celestial bodies, too) water-relevant SGR – again because of the scientific typhlosis is not mentioned. The gibberish spread around in the lexica (cf, eg, Wikipedia) about "gravitational force", "centers of gravity", "centrifugal force" &&& is one of the most unpardonable & malicious scientific ludicrousnesses to be recorded in the history of humankind.

To evoke such massive stupidity in the heads of intelligent people who are, however, coerced into collective structures & disciplinary systems naturally has weighty reasons: cf "2. The Excitation Background" in "The Paradigm Change from *Natural Sciences* → *Natural Lore* Research". Here we only point to the problem for covering a – by no means complete! – list of water properties not researched qualifyingly according to *natural lore*, the utilization of which is prevented by the natural sciences' methods, or rather mania: **trusting the established absurd scientific structures can never – as we have learned! – lead to research for the good of humanity, so that politics on the basis of ICS have to advance appropriate guidelines for natural lore research & LQS<sup>7</sup>-analysis.**

Research = UNDERSTAND →	COPY = Goal	Examples:
Natural water-bearing	<ul style="list-style-type: none"> <li>• Regulating waters for preventing floods &amp; carrying characteristics</li> <li>• Power stations with spiraling pressure lines &amp; penstocks to suction turbines</li> <li>• Spiraling pipes delivering enlivened ("levitated") water under natural pressure &amp; free of depositions into homes</li> </ul>	
Agriculture	<ul style="list-style-type: none"> <li>• Groundwater correction by natural application of <u>copper</u> tools</li> <li>• Agriculture <u>without</u> artificial fertilizers &amp; <u>without</u> gene mutated &amp; costly patented seed</li> </ul>	
Preparation	<ul style="list-style-type: none"> <li>• Purification of waters by enlivened ("levitated") water</li> <li>• Seawater conversion</li> </ul>	
Technology, united with SGR-energy	<ul style="list-style-type: none"> <li>• Stationary &amp; mobile implosion motors</li> <li>• Local heating &amp; energy power stations</li> </ul>	
Medicine	Therapeutical & operative prevention & curing methods (such as, eg, ELEMR <sup>8</sup> treatment of body water)	

<sup>5</sup> EVU = Electric Vortex Universe (cf [www.paf.li/perceptions.htm](http://www.paf.li/perceptions.htm))

<sup>6</sup> It perfectly explained the recent earthquake at Basel, Switzerland, monthly (& decreasingly) caused by the water confined at high pressure in 5'000 m depth, as shown by the water GFMI @ [www.sources.li/beben-21.03.07.pdf](http://www.sources.li/beben-21.03.07.pdf). Naturally the conventional earthquake scientists including the responsible engineers & even investigators would neither see nor understand what they have in front of their eyes, because they have no idea about gravitation, let alone SGR, & never having learned that upcoming earthquakes are not detected by seismic activities, but by substance-relevant processes producing signals that, eg, animals can readily interpret.

<sup>7</sup> LQS = Logical Qualitative System (as opposed to UQT)

<sup>8</sup> ELEMR = Extremely Low Electro-Magnetic Resonance

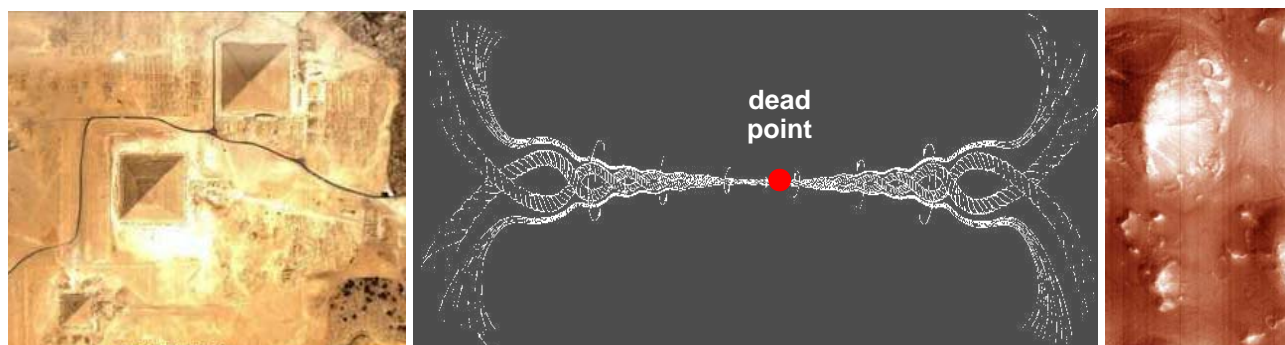

## The "Trout Motor" or the Journey to Mars & Beyond

**Observation:** in the mountains, a trout can levitate itself up a 100 m waterfall. In the bottom trough it will circle it ever faster & in a tightening spiral, then (probably sensing certain oscillations in which the branchia are involved) catch the in-turning vortex to be carried up in it, arriving in the dead point roll over by 180° to have itself thrown by the out-turning vortex into the upper trough.<sup>9</sup>

**EVU:** Because it may be surmised that the SGR energy – which also drives & stabilizes the galaxies, their suns & then again their planets & moons – also controls & structures water in the same ways (the natural sciences are still unable to explain these characteristics), it should not be impossible to take advantage of these vortices for implosive actuation impelling vehicles. *However, before we have understood this implosive drive technique to the point where we can employ it technologically, it will not become available in the SGR environment.*

**Natural History:** The surface of Mars (as also of the moon) was totally devastated by the tail of the still young Venus.<sup>10</sup> While we do not know on what orbit it moved relatively to earth before this encounter, there is at least one photographic hint to an apparently ruined complex which can hardly be ascribed to natural formation, the so-called City with a pyramid-like (*ie* angular) structure about the size of the Great Pyramid in Giza (about the creation of which we also remain in total darkness).

**Conjecture:** On the SGR background a material Earth<->Mars may be thinkable:

**Consequence:** Without the previous – qualifying – exploration based on natural lore of the so-called water "anomalies" & particularly of the water's bipolar vortex characteristics, implosive SGR utilization can hardly be realized: *in contrast, within foreseeable time faster than light space travel operating on nature immanent implosive energy may be anticipated.*

---

Understanding that the responsibility for such a far reaching Paradigm Change must finally remain with politics, the present contribution to the Physical Congress is also to be considered a *Memorandum to the Presidium & the Government of the Russian Federation.*

Above that, it may be known as the Manifesto of Paradigm Change from Natural & Historical Sciences to Natural & Historical Lore: *Rational People of the World, Unite!*

## Unquantifiable – Unexplainable! – by the Natural Sciences

**Instruction:** You need 2 empty bottles with standard thread, for example normal mineral water bottles.

- Fill one of the bottles up to about three quarters with tap water, then screw on the Vortex Tube.
- Then from above screw on the second bottle into the Vortex Tube & tighten it firmly.
- Then turn the assembly vertically with the full bottle to the top & let the water flow into the lower bottle.
- Swing the assembly in a circular manner, until the rising bubbles form into a vortex; a little squeeze on the lower bottle may help to initially get the air up into the full bottle.
- Repeat this procedure a second or third time. Then you can enjoy the invigorated water (or juice, or even wine)!

---

**Water, the blood of the Earth, acts like bipolar electricity on an in- & an outturning & gravitationally driven vortex, exchanging energy with its environment by implosion (instead of harmful & destructive explosion).**
