

SGR – Substance-relevant Gravitational Resonance

www.paf.li/perceptions.htm#_Toc2338380 in the EVU:

"Further, the author found out by using these scales that the gravity of the various planets has a weight-decreasing or weight-increasing influence on definite metals, respectively. This becomes most evident when the planets are on their opposition positions. The maximum deflections of the scales allow to find out with all surety and hourly precision which metal is assigned to the planets being in opposition and at which hour the point of opposition is reached. Up to now, the author found out that there is a connection between the metal mercury and the planet Mercury as well as between lead and Saturn."

The confirmation of such findings (since 1960f) – ascertained from natural knowledge with the GFMI – indicates that independently from EM dynamics SGR-oscillations transport signals, energy, & momentum at many times the speed of light, such results of events possibly even simultaneously. But though exact circumstances are still to be researched experimentally (because the available planetary positions follow calculated celestial mechanics instead of observed celestial dynamics; & to observe if there are differences between upper & lower opposition, *ie* if the sun influences SGR), there can be no doubt at all about the independency of fast SGR & slow EM connexions. Because, as the example of the Saturn<->lead connexion demonstrates, the GFMI by a change of pressure reacts to the planetary opposition at the moment of its occurrence, & not only after more than an hour when observed at *c*! One is reminded of the SGR functioning similarly to an inline pendulum array.

So there can also be little doubt that the SGR properties & effects – now that they are known & can be recorded – might soon also be controlled. Of course it must then also be concluded, that advanced intelligences in the universe would not communicate by way of *c*-restricted EM greenhorn technology, but by SGR methods having up till now remained invisible for us; moreover, if we think of SGR signals warning animals of impending earthquakes, relevant SGR signals generated by the brain may point to new possibilities, too.

SGR is transporting signals, energy & momentum at many times the speed of light, maybe even simultaneously with the event

SGR = Substance-relevant Gravitational Resonance (cf www.sources.li/SGR-e.pdf)

EVU = Electric Vortex Universe (cf www.paf.li/perceptions.htm)

GFMI = Gravitational Field Measuring Instrument, cf, eg:
